

FUTURA GLASS

LIGHTWEIGHT FIBREGLASS PUTTY

DEFINITION

FUTURA GLASS is a lightweight polyester putty reinforced with glass fibre for the repair of chassis, of highly innovative conception. It can be applied to those surfaces which require the maximum resistance and adherence.

Due to this special formulation, **FUTURA GLASS** is a much softer and more flexible putty than other fibreglass putties, which allows a great ease of application.

FUTURA GLASS fulfils VOC limitation legislation, for what is an Environmentally respectful product. A principal advantage is the fact that its composition minimizes the appearance of pinholes which may appear after the application, therefore eliminating one of the stages of the repair process in comparison with other fibreglass putties.

A better finish, greater ease of sanding and reduction of process times are aspects previously unknown in a fibreglass putty; we therefore present **FUTURA GLASS** to you as the dawn of a new concept.

PHYSICAL CHARACTERISTICS

Nature:	Unsaturated poly	ester
Colour:	Light blue	
Specific weight:	1,2 kg/l at 20ºC	
VOC:	6 g/l	Mixing Application

AUXILIARY PRODUCTS

Hardener PBO

SUITABLE SURFACES

It may be applied on steel, aluminium, galvanised and polyester surfaces. When maximum protection is required apply on epoxy primer. Do not apply on thermoplastic finishes and Wash Primers.
